New Product...

A. Product Name: Clear Nano Ag/ZnO dispersion

Application: Skin care, Medical Equipment, and Detergent etc.

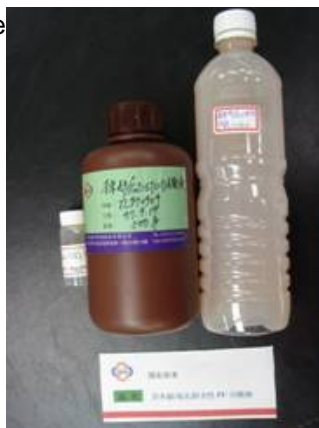

Dilution rate: Dilute 10 times for use

B. Product Name: Waterborne PU Nano Ag/ZnO Dispersion

Application: Textile, Shoe Material Etc.

Dilution rate: Dilute 10 times for use

Feather:Revolutionary Exterminator

The innovation of this product challenges the traditional concept of killing germs and virus with light. The combined mechanism of photocatalyst (ZnO) and catalyst (Ag) improves the effectiveness of extermination. Killing germs and virus with or without light from Top Nano revolutionary product line: Nano Ag/ZnO.Lethal Contact

Nano Silver carries positron and Nano Zinc Oxide has negatron. Similarly, some of the germs and virus carries either positron or negatron that might be easily destroyed by contact. The combination of Nano Silver and Nano Zinc Oxide provides the resolution of killing germs and virus with positron or negatron in contact. Permanent Anti-microbial

The balance between Nano Ag and Nano ZnO creates the permanent anti-microbial additive. The technology has improved discolor of Nano Ag and limitation of application.

Not Precipitation
The product is clear aqueous dispersion. It does not precipitation.

Innovative Technology Initiates Value
