Top Nano's break-through in nanotechnology!

After many years of research, Top Nano brings the Antibacterial ceramic tiles that can resist more than 1200℃ kiln-burn temperature. Under an electron microscope, one can see the nanomaterial arrangement in perfect order on the surface of the ceramic tile that protects it and gives it a long-lasting antibacterial effect.

According to certified SGS antibacterial test, the R value is 5.88, 99.999% of bacteria were destroyed.

Patent pending (98113453)

Welcome cooperation from manufacturers and distributors.
