A new antibacterial water filter!

A nano-scale silver/Zinc oxide active carbon filter that is long lasting, economic , and always gives you clean water.

We employ nanotechnology again by applying nano-scale silver/zinc oxide compounds onto natural coconut surface with active carbon to form this water filter. Not only does the active carbon bind micro-organisms, but the combinations of nano-materials and photocatalyst gives this filter both antiviral and antibacterial (up to 600 plus bacteria) results. It certainly provides you cleaner and safer drinking water.

Patent pending (98117006)

Welcome cooperation from manufacturers and distributors.
